

**M2 internship  $\rightsquigarrow$  Ph.D. position**  
**Exploring computation/communication tradeoffs  
in distributed optimization for machine learning**

**Advisors:** Franck Iutzeler (Univ. Toulouse III) Sixin Zhang (Toulouse INP)  
Edouard Oyallon (CNRS & Sorbonne Université)

**Key-words:** optimization, distributed systems, asynchronous communications.

**Topic:** As the field of deep learning continues to advance, the need for scalable and efficient optimization algorithms becomes increasingly crucial. Asynchronous distributed optimization offers a promising avenue for enhancing the training of large-scale deep learning models by allowing for parallelization and efficient use of computational resources.

The primary goal of this internship is to investigate and develop novel asynchronous distributed optimization strategies tailored specifically for balancing the computations with the communications. The focus will be on improving convergence rates and tradeoffs by exploiting several recent advances in distributed optimization (eg [1,2]). As a long term perspective, this will be implemented for training large neural networks in a distributed computing environment.

**Practical information:**

- Hosted at the [Mathematics Institute of Toulouse](#)
- Starting date: March/April 2024  $\rightsquigarrow$  Ph.D. position in October 2024 upon successful internship
- Strong background in mathematics required; proficiency in Python appreciated
- Contact and application: [franck.iutzeler@math.univ-toulouse.fr](mailto:franck.iutzeler@math.univ-toulouse.fr)
